Education

Howard University

Bachelor of Science in Computer Science

Aug. 2021 – May 2025

Washington, DC

Technical Skills

Languages: Python, Java, C++, Swift, JavaScript, React Native, HTML, CSS, Flask

Developer Tools/Technologies: Distributed Version Control, REST APIs, Android Studio, Xcode, Relational Schema(Back4App), Google Cloud Storage, AppEngine and GCP, Requirements Engineering and Technical Design, Full stack development, Web development, Continuous Integration/Continuous Deployment (CI/CD))

Experience

Apple

Incoming Apple Software Engineering Intern

May 2023

Cupertino, California

Meta

Software Engineer Intern

May 2022 – August 2022

Seattle, Washington

- Developed **Android** Applications utilizing **Java** programming language, **Parse Back4App Database SDK** and multiple **API** resources
- Independently conceived and implemented the primary project, PeerRequest, which facilitated task listings and completion, boosting user engagement within the app.
- Significantly improved the user interface, resulting in an enhanced user experience and positive feedback.

Google Tech Exchange

Python, Software Development Studio, Applied Data Structures

January – May 2023

Remote

- Accepted into Google Tech Exchange program for a semester, taking all Computer Science courses under Google experts. Demonstrates dedication to academic excellence and ability to thrive in dynamic environments.

Projects

PeerRequest | *Java, Parse, Android Studio, FusedLocationAPI, Cloud Code*

May 2022

- Developed a Java-based Android app from conception, enabling users to create and view task listings and request completion from other users.
- Leveraged Parse for user authentication and database storage, proficiently executing a range of in-app queries.
- Incorporated Google Maps and the fusedLocation API to showcase nearby tasks as markers on a map, offering a seamless user experience.
- Applied advanced object-oriented programming techniques, including inheritance, to create diverse account types and databases.
- Implemented a dynamic chat feature to facilitate communication between users, ensuring successful task completion and mutual satisfaction.

FoodChoice | *Swift, Objective-C, Places API, Parse*

May 2023

- Conceptualized and developed a dynamic iOS app using swift and objective-C, that allows a user or group of Users find places to eat near them.
- Integrated the Google Places API to accurately populate screens with restaurants based on User's location.
- Enhanced user engagement by facilitating group sessions where friends can invite each other to choose a restaurant together
- Designed and implemented a user-friendly UI using the layout editor, facilitating seamless interaction between different app features.

DIJ Wiki | *Full Stack Development— Python, Flask, HTML, CSS, Google Cloud Platform (GCP)*

May 2023

- Engineered a comprehensive wiki website leveraging Python and Flask framework, effectively utilizing HTML and CSS for enhanced web design aesthetics.
- Implemented robust user authentication and data storage solutions by integrating Google Cloud Storage, thereby ensuring user data integrity and security.
- Streamlined the development process by incorporating Continuous Integration/Development (CI/CD) methodologies, thereby significantly reducing deployment time and enhancing the overall productivity.
